

## LAB Exercise – 8

Ismail basheer

2348521

The screenshot shows an IDE interface. The top part displays a project tree for a project named 'conference [master 11]'. The tree includes folders for 'Source Packages', 'Test Packages', 'Dependencies', 'Java Dependencies', and 'Project Files'. Below these, a package 'com.mycompany.conference' is expanded, showing two files: 'Conference.java' and 'c.java'. The bottom part of the image shows the code editor for 'Conference.java'. The code includes a package declaration, imports for logging, a Javadoc comment with the author 'ismaeel', and a 'main' method that attempts to load a class named 'Rahul' and logs an error if it fails.

```
/* Click nbfs://nbhost/SystemFileSystem/Templates/Licenses/license-default.txt to change this license
 */

package com.mycompany.conference;

import java.util.logging.Level;
import java.util.logging.Logger;

/**
 *
 * @author ismaeel
 */
public class Conference {

    public static void main(String[] args) {

        try {
            Class.forName(className:"com.mycompany.conference.Rahul");
        } catch (ClassNotFoundException ex) {
            Logger.getLogger(name: Conference.class.getName()).log(level: Level.SEVERE, msg: null, thrown:ex);
        }
    }
}
```

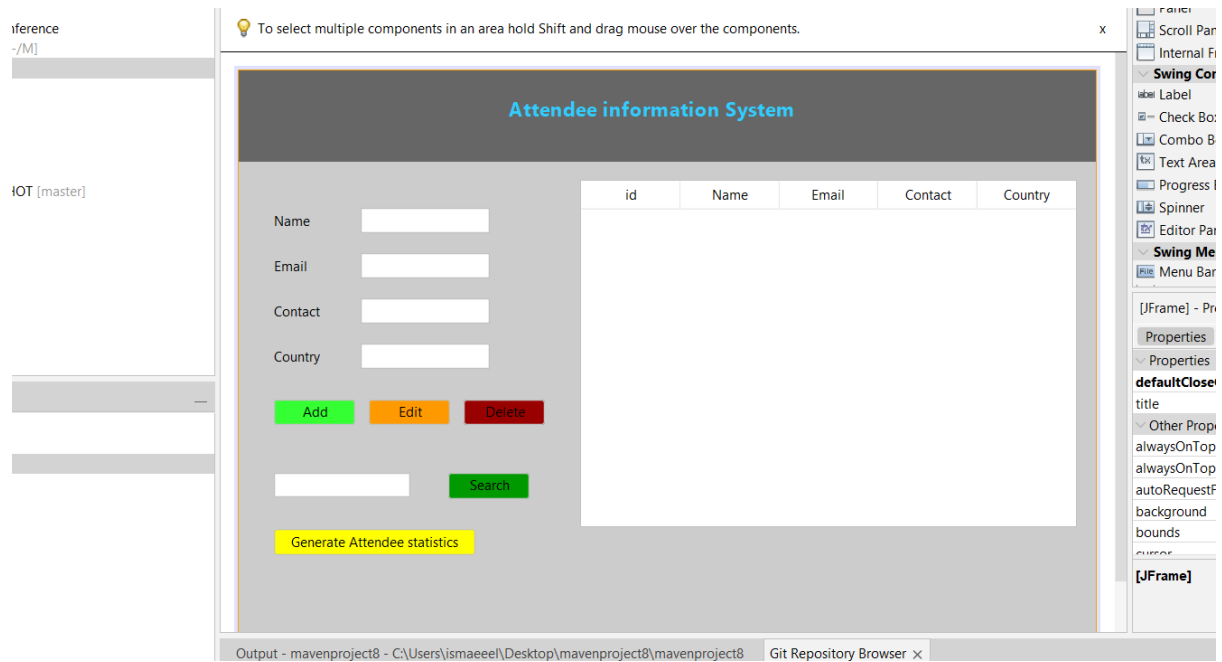

```

import java.sql.DriverManager;
import java.sql.PreparedStatement;
import java.sql.ResultSet;
import java.sql.ResultSetMetaData;
import java.sql.SQLException;
import java.util.Vector;
import java.util.logging.Level;
import java.util.logging.Logger;
import javax.swing.JOptionPane;
import javax.swing.table.DefaultTableModel;
import java.sql.CallableStatement;

/**
 *
 * @author ismaeel
 */
public class c extends javax.swing.JFrame {

    /**
     * Creates new form c
     */
    public c() {
        initComponents();
        connect();
        loadAttendees();
    }
    private Connection con;
    private PreparedStatement pst;

```

localhost / 127.0.0.1 / conference

localhost/phpmyadmin/index.php?route=/server/databases

Server: 127.0.0.1 » Database: conference
